Office Action Summary	Examiner	Art Unit				
	Joshua L. Pritchett	2872				
The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence address				
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status						
1) Responsive to communication(s) filed on 21 Ju	ilv 2006.					
	action is non-final.					
3) Since this application is in condition for allowar		secution as to the merits is				
closed in accordance with the practice under E	•					
Disposition of Claims						
4) ☐ Claim(s) 1-13 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration.  5) ☐ Claim(s) is/are allowed.  6) ☐ Claim(s) 1-13 is/are rejected.  7) ☐ Claim(s) is/are objected to.  8) ☐ Claim(s) are subject to restriction and/or election requirement.						
Application Papers						
<ul> <li>9) ☐ The specification is objected to by the Examiner.</li> <li>10) ☐ The drawing(s) filed on 27 October 2003 is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).</li> <li>11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.</li> </ul>						
Priority under 35 U.S.C. § 119						
<ul> <li>12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).</li> <li>a) All b) Some * c) None of:</li> <li>1. Certified copies of the priority documents have been received.</li> <li>2. Certified copies of the priority documents have been received in Application No</li> <li>3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).</li> <li>* See the attached detailed Office action for a list of the certified copies not received.</li> </ul>

#### **DETAILED ACTION**

Page 2

This action is in response to Request for Continued Examination and Amendment filed July 21, 2006. Claims 14-19 have been cancelled as requested by the applicant.

## Specification

The abstract of the disclosure is objected to because the abstract contains legal language. The examiner request the applicant remove the term "comprises" from the abstract. Correction is required. See MPEP § 608.01(b).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 2, 4, 5 and 7-13 rejected under 35 U.S.C. 103(a) as being unpatentable over Eastman (US 6,411,434) in view of Lannai (US 4,621,911).

Art Unit: 2872

Regarding claim 1, Eastman teaches a confocal microscope with a sample carrier (abstract) comprising a first coverslip (26) and a second coverslip (16); a frame (12 and 14) to hold a first (26) and second (16) coverslip with a cavity between them (Fig. 6). Eastman further teaches a medium filled in the cavity (col. 7 lines 32-37). Although Eastman is silent as to the medium having approximately the same refractive index of the first and second coverslips, the refractive index of the Eastman medium must approximately match the refractive indices of the first and second coverslips because a significant difference between the refractive indices would cause reflection of light at the interface of the medium and the coverslip. Eastman lacks reference to the second coverslip including a mirror surrounding the sample region. Lannai teaches the use of a mirror (76) surrounding a sample region (Fig. 7). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have the Eastman invention include the mirror of the Lannai invention for the purpose of efficiently passing the emitted fluorescence of the specimen (Lannai col. 9 lines 9-12).

Regarding claim 2, Eastman teaches the substrate of the coverslips being anisotropic or isotropic materials that are transparent to the wavelengths used (Fig. 11). The coverslips must inherently be either anisotropic or isotropic.

Regarding claim 4, Eastman reference teaches the use of a sample as thin as possible (col. 2 lines 25-35).

Regarding claim 5, Eastman teaches the invention as claimed but lacks reference to the claimed wavelengths. Lannai teaches the mirror on the second coverslip reflective for light in a wavelength range of 300-1300 nm (col. 5 lines 58-60). Lannai teaches the mirror operating at a wavelength of 365 nm. It would have been obvious to a person of ordinary skill in the art at the

Art Unit: 2872

time the invention was made to have the Eastman invention include the mirror of the Lannai invention for the purpose of efficiently passing the emitted fluorescence of the specimen (Lannai col. 9 lines 9-12).

Regarding claim 7, Eastman teaches the invention as claimed but lacks reference to a dielectric mirror coating. Lannai teaches the mirror is made of a dielectric coating (claim 18). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have the Eastman invention include the mirror of the Lannai invention for the purpose of efficiently passing the emitted fluorescence of the specimen (Lannai col. 9 lines 9-12).

Regarding claims 8 and 10, Eastman teaches the use of a circular sample region (Fig. 1).

Regarding claim 9, Eastman teaches the use of an adhesive to secure portions of the coverslip together (col. 6 lines 40-50).

Regarding claims 11 and 12, Eastman teaches the invention as claimed but lacks reference to the claimed shape. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the shape of the coverslips be square, since it has been held that a mere change in shape of an element is generally recognized as being within the level of ordinary skill in art when the change in shape is not significant to the function of the combination. Further, one would have been motivated to select the shape of a square for the purpose of allowing the coverslips to be more easily held in place for examination.

Regarding claim 13, Eastman teaches the invention as claimed but lacks reference to the use of an interferometric fluorescence microscope. Lannai teaches the microscope is an interferometric fluorescence microscope (abstract). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the Eastman reference used as

Art Unit: 2872

an interferometric fluorescence microscope for the purpose of determining the emission spectrum of a sample.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Eastman (US 6,411,434) in view of Lannai (US 4,621,911) as applied to claim 1 above, and further in view of Lakowicz (US 2002/0160400).

Eastman in combination with Lannai teaches the invention as claimed but lacks reference to the use of quartz and glycerol. Lakowicz teaches the use of quartz as a means to create the coverslips (Fig. 1A). Lakowicz teaches the use of glycerol as a means to fill the cavity of a microscope slide (para. 0092). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the Eastman in combination with Lannai invention include the quartz coverslips and glycerol of Lakowicz for the purpose of efficiently transmitting light through the coverslips and protecting the sample.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Eastman (US 6,411,434) in view of Lannai (US 4,621,911)as applied to claim 1 above, and further in view of Aagard (US 3,720,924).

Eastman in combination with Lannai teaches the invention as claimed including the use of a metal mirror (para. 0019) but lacks reference to the use of aluminum in the mirror. Aagard teaches the use of aluminum to create a mirror in a microscope (col. 9 lines 60-63). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have

Art Unit: 2872

the Eastman in combination with Lannai mirror made of aluminum as taught by Aagard for the purpose of reflecting light in the visible wavelength range.

Page 6

### Response to Arguments

Applicant's arguments, see Amendment, filed July 21, 2006, with respect to the rejection(s) of claim(s) 1-13 under Bewersdorf have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Eastman in view of Lannai. Applicant provided a statement of common assignment to overcome the 35 U.S.C. 102(e) date of Bewersdorf and a 37 CFR 1.131 affidavit to overcome the 35 U.S.C. 102(a) date of Bewersdorf.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ulmer (US 5,776,674) teaches a confocal microscope with coverslips on both sides of a specimen.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joshua L. Pritchett whose telephone number is 571-272-2318. The examiner can normally be reached on Monday - Friday 7:00 - 3:30.

Art Unit: 2872

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew A. Dunn can be reached on 571-272-2312. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
